Panasonic Lumix DMC-LX2

CA\$18 / week

The Panasonic Lumix DMC-LX2 Digital Camera incorporates a wide angle Leica DC lens with 4x optical zoom (equivalent to 28mm - 112mm on a 35mm film camera) and the MEGA O.I.S. (Optical Image Stabilizer) system in addition to an enhanced CCD capable of 10.2-megapixels and larger 2.8" 16:9 wide LCD. The DMC-LX2 is further distinguished from other cameras by its full manual controllability with a joystick allowing users to easily access the manual features for more creative shooting. It also boasts the Venus Engine III high performance image processing LSI to dramatically reduce image noise - even using the high sensitivity setting of ISO 1600 at full resolution.

10.2 Megapixel 16:9 Aspect CCD

The DMC-LX2 features a 10.2-megapixel 16:9 aspect CCD and the aspect ratio can be easily selected between 16:9 or 3:2 in addition to the conventional 4:3 on a shot-by-shot-basis with a switch on the lens barrel to best suit the composition of the image. Even after shooting, the 16:9 ratio can be converted to 3:2 or 4:3 within the camera. With 10.2 Megapixels of resolution, you'll be able to print extremely detailed images at print sizes up to 20x30."

Wide Angle 4x Optical Zoom LEICA DC Lens

The DMC-LX2 features a f/2.8 4x optical zoom 28mm wide angle Leica DC Vario-Elmarit lens with an equivalent focal length of 28mm to 112mm on a 35 mm

film camera. Incorporating three aspherical elements, this lens provides high optical performance while preserving the compactness of the unit.
