Rolling Set

Contact for pricing

"Rolling" cabin mockup
- Fully practical cabin interiors on their own rolling platforms (10"-high deck).
- Short term rental
- Quick turnaround with some assembly required
"Rolling" airline sets are fully practical cabin interiors on their own rolling platforms (10" high deck). Each section is one sided of the cabin (with 1/2 an aisle) 10' long. Floor, wall and overhead bins are one unit. Multiple wall units and flooring are available for you to select the width and length of set that will work best for your scene.

Each wall section has dimmable Tungsten LED (MacTech) wall-wash lights, functional incandescent passenger reading lights, illuminated flight attendant call buttons, illuminated fasten seat belt and no smoking signs, and deployable oxygen masks and window shades.

Each 10' length of cabin allows for 3.5 rows of Coach/Economy class seats or 2.5 rows of Business or First class seats, or 1.5 rows of lay flat seats. The equipment can be set up as a "One-sided" cabin, or one (1)-aisle "Commuter" wide (up to 4 coach seats across and one aisle) cabin, or one (1)-aisle "Narrow body" (up to 6 coach seats across) cabin, or as a two (2)-aisle "Wide body" (with up to 7 coach seats across), or as a two (2)-aisle "Extra Wide body" (with up to 9 coach seats across), or as a two (2)-aisle "Jumbo Wide body" (with up to 10 across coach class seats). Each set comes with a complement of Seats. Set-appropriate Set Dressing included with rental.

Production value is added with Service Areas that can be placed in the front, middle or end of any width "Rolling" set. Complete galley units, practical or plug doors, lavatory units and Cabin Crew station are available. Additional Cockpit, Service Areas, Doors and Walls are optional.
These are supervised sets that include an Aero Mock-Ups Technical Supervisor.
